

can i predict forest fire

forest can be caused by nature

forest fire are unpredictable events

says

can i identify the difference between forest fire and normal forest image

Many deep learning techniques have applied

This would save millions of different species inside the forest

is the outcome will be accurate?

Thinks

Convolutional neural networks, a model to detect wildfire smoke

It can cause great damage on the environment, wildlife

exact detection of forest fire

quick intimation

Does

early warning to reduce the damage

Make Prevention

really useful if it is developed

It is an essential

Feel

It can effect the psychology of a tribes and animals on different levels

Large economics costs of natural environment

Pain

can this product works in all situations

technical glitches

Gain

It can done in low cost

protect the flora and fauna
